Soudal LEED™ Information

Dear Soudal Customer,

Thank you for your inquiry concerning LEED (Leadership in Energy and Environmental Design) credits for Soudal products. We at Soudal would like to thank you for your environmentally conscious design, construction, operations and maintenance ideals. Soudal is pleased to be a U.S. Green Building Council member and a major proponent of the LEED initiative in the construction materials industry.

LEED is an internationally recognized green building certification system, providing third-party verification that a building or community was designed and built using strategies aimed at improving performance across all the metrics that matter most: energy savings, water efficiency, CO₂ emissions reduction, improved indoor environmental quality, and stewardship of resources and sensitivity to their impacts.

Developed by the U.S. Green Building Council (USGBC), LEED provides building owners and operators a concise framework for identifying and implementing practical and measurable green building design, construction, operations and maintenance solutions.

LEED is flexible enough to apply to all building types – commercial as well as residential. It works throughout the building lifecycle – design and construction, operations and maintenance, tenant fitout, and significant retrofit. LEED for Neighborhood Development extends the benefits of LEED beyond the building footprint into the neighborhood it serves.

Soudal excels at offering solutions with advanced product and service knowledge. We are committed to superior customer service. Please see the LEED letter for each individual product for more information about how they may contribute positively toward LEED project certification.

Sincerely,

Demian Weaver
LEED Administrator
