SoudaSeal SL LEED™ Product Information

SoudaSeal SL (Self Leveling) is an advanced polymer horizontal sealant for expansion joints, cracks in sidewalks, patios and foundations. This product offers superior adhesion to concrete and many other substrates. Soudal excels at offering solutions with advanced product and service knowledge. We are committed to superior customer service.

Manufacturing Location

SoudaSeal SL is made in Manassas, Virginia. Should your job site be within 500 straight-line miles of Manassas, this material will help contribute positively towards the MR Credit 5: Regional Materials. No single extracted material is used to produce the majority of this product. All raw materials come from one of several sources which in turn come from one of several raw material feed stocks. As such, point source for the raw materials cannot be determined.

Recycled Content

Soudal certifies that SoudaSeal SL is manufactured with less than 5% post-consumer recycled material content from the normal recovery of raw materials in the manufacturing processes.

VOC Content

Soudal certifies that the VOC (volatile organic content) of SoudaSeal SL is <25g/L and will therefore contribute toward LEED IEQ Credit 4.1: Low Emitting Materials – Adhesives and Sealants.

Sincerely,
